

SPORTSMAN'S VAULT DOOR

AMERICA'S FIRST HIGH PERFORMANCE VAULT DOOR

Clients: FBI, CIA & U.S. SECRET SERVICE

Welcome! Sportsman Vaults has been in business over 40 years & has never had a vault door drilled open, pried open or lost to fire. We attribute our perfect track record to our Step-System Doors, 4-Barrel Relockers & 3/4" steel pry-proof frame. Our advanced innovation & 6000 DEGREE CONCRETE FIRE-PROOFING has earned us business with the FBI, CIA, Homeland Security & Secret Service.

SPORTSMAN'S VAULT DOOR

AMERICA'S FIRST HIGH PERFORMANCE VAULT DOOR

INSTALLATION* **GUIDE*

First off, It's Easy!

Step 1 - Build your vault door opening $3/8$ " taller and wider than your vault door. For example, if you're ordering an 80" x 36" x 8" vault door, your opening should be $80\ 3/8$ " tall x $36\ 3/8$ " wide x 8" deep.

Step 2 - When installing your Sportsman vault door make sure your door opening is straight & plumb. If you constructed your vault room with concrete blocks, make sure your cement blocks around door are filled with actual concrete.

Step 3 - Before you insert your vault door in your opening, squeeze a healthy amount of high-end fireproof coxing 1" inside your concrete opening.

Step 4 - Insert your vault into its opening. Make sure it's level. Mark the 12 - $5/8$ " holes on your frame onto your concrete. Wiggle the vault door out and drill 12 - $5/8$ " lag-bolt sleeves onto your concrete opening.

Step 5 - Wiggle the vault door back into place, matching up the twelve holes and bolt-in-place.

Step 6 - Go inside your vault room and inject a healthy amount of fireproof caulking in the space between your rear vault frame and your concrete opening. That's it! Enjoy your vault!

ALL VAULTS DOORS ARE MADE IN THE USA

Or just call us and we'll walk you through the whole installation process.
